Electronics & communication engineer (Kocaeli University, 2026) building AI-driven automation in daily production use — runs LLM agents with production-grade discipline: spec-driven generation, golden-test freezes, lint gates. At home where software meets real hardware and real customers.

SKILLS

Programming: Python · C · C++ · JavaScript
AI & Automation: LLM tool-use & RAG agents · n8n workflow automation · OCR (Tesseract) · TDD · Git
Backend & Data: FastAPI · Flask · Docker · Supabase · Postgres/pgvector
CAD & Hardware: ezdxf · AutoCAD · DMX512 · RDM (E1.20)
Languages: English (fluent, C1) · Turkish (native) · Kazakh (B2)

WORK EXPERIENCE

Software & Automation Engineer · Aquatronic Sep 2025 – Present
• Sole developer of the company’s internal software — an AI-orchestrated CAD engine, a multi-user ERP, a native C++ DMX/RDM manager, and a CRM/OCR pipeline — all in daily production use.
• Wire and assemble electrical control panels on the production floor, and plan the montage.
• Support international sales — prepare quotations, run the CRM, and join customer and technical meetings in English.

Continuous Improvement Intern · Rokeron (formerly Formiva) 2025
• Applied 5S, Kaizen, VSM and SMED methodologies; contributed to live improvement projects and production analysis.

Maintenance Engineering Intern · Rokeron (formerly Formiva) 2025
• Performed preventive maintenance and fault diagnosis, gaining hands-on experience in industrial manufacturing workflows.

Operations Manager · Mr. Panda 2023 – 2024
• Launched the restaurant’s first online ordering and delivery channels (Trendyol, Yemeksepeti, Getir), designed cost-effective menus, ran daily operations and trained the team.

Operations Supervisor · Sales Consultant · Zuma · FLO 2021 – 2023
• Ran scheduling, staff reviews and daily store operations; sold on the floor, handled customer service, and kept stock and the store organized.

PROJECTS

Control-Panel CAD Automation · Python · LLM agents · ezdxf 2026
• AI-built Python engine — 800+ tests, 20+ golden projects, lint gate — turning a component netlist into rule-checked DWG schematics; drafting time cut to ~1/5 (hours → minutes).

AI Microservice Stack · FastAPI · Docker · Postgres/pgvector 2026
• Containerized service covering the AI-automation stack end to end: an LLM tool-use agent loop, a FastAPI REST layer, RAG over pgvector with cited sources, and Docker Compose deployment — provider-agnostic (OpenAI/Gemini) and mock-testable offline. Code: github.com/salihibrahimuslucan/ai-service-stack

AquaCONFIG v2 · C++ · Win32 · RDM 2025–2026
• Native Windows DMX/RDM device manager (Win32, GDI) with a full ANSI E1.20 RDM stack and custom PIDs; diagnosed a field PowerBox-repeater fault that was blocking RDM.

Aquatronic ERP · Supabase · Postgres · JS 2025
• Multi-user ERP — inventory, production orders, BOM consumption, CRM — on Supabase Postgres with row-level security; 8 people use it daily. Code: github.com/salihibrahimuslucan/aquatronic-erp

CRM Database & OCR Scanner · Python · Flask · Tesseract 2025–2026
• Consolidated 2,300+ trade-fair contacts into one scored database (HOT/HIGH/MEDIUM/LOW) with a structured data-quality cleanup; OCR tool digitizes handwritten fair notebooks.

EDUCATION

Electronics & Communication Engineering · Kocaeli University 2019 – 2026
Computer Science · Politecnico di Torino 2021 – 2022

VOLUNTEERING

Board Member · KAZAKDER 2022 – Present
• Presented at Kazakhstan Trade Center opening; coordinated emergency support for Kazakhstani nationals during civil unrest; co-organized 2nd Unity & Solidarity Festival.
